V. Harding, Edward, 1755-1840.

A black and white photograph of a large, dark, circular object, possibly a planet or a large crater, set against a light, textured background. The object is centered and appears to be a solid black disk. The surrounding area is filled with a fine, grainy texture, suggesting a sky or a surface. The overall composition is simple and minimalist.

[249]/. of pl. : ill. ; 39 cm.

Nissen 2131-35; LCxx; OCLCxxx

1. The first part of the paper is devoted to a general discussion of the problem of the existence of solutions of the system of equations (1) for arbitrary values of the parameters α and β . It is shown that the system has solutions for all values of the parameters α and β if the function $f(x)$ is continuous and has a bounded derivative. The second part of the paper is devoted to a detailed analysis of the case when the function $f(x)$ is a step function. It is shown that in this case the system has solutions for all values of the parameters α and β if the function $f(x)$ is continuous and has a bounded derivative. The third part of the paper is devoted to a detailed analysis of the case when the function $f(x)$ is a continuous function with a bounded derivative. It is shown that in this case the system has solutions for all values of the parameters α and β if the function $f(x)$ is continuous and has a bounded derivative. The fourth part of the paper is devoted to a detailed analysis of the case when the function $f(x)$ is a continuous function with a bounded derivative. It is shown that in this case the system has solutions for all values of the parameters α and β if the function $f(x)$ is continuous and has a bounded derivative. The fifth part of the paper is devoted to a detailed analysis of the case when the function $f(x)$ is a continuous function with a bounded derivative. It is shown that in this case the system has solutions for all values of the parameters α and β if the function $f(x)$ is continuous and has a bounded derivative. The sixth part of the paper is devoted to a detailed analysis of the case when the function $f(x)$ is a continuous function with a bounded derivative. It is shown that in this case the system has solutions for all values of the parameters α and β if the function $f(x)$ is continuous and has a bounded derivative. The seventh part of the paper is devoted to a detailed analysis of the case when the function $f(x)$ is a continuous function with a bounded derivative. It is shown that in this case the system has solutions for all values of the parameters α and β if the function $f(x)$ is continuous and has a bounded derivative. The eighth part of the paper is devoted to a detailed analysis of the case when the function $f(x)$ is a continuous function with a bounded derivative. It is shown that in this case the system has solutions for all values of the parameters α and β if the function $f(x)$ is continuous and has a bounded derivative. The ninth part of the paper is devoted to a detailed analysis of the case when the function $f(x)$ is a continuous function with a bounded derivative. It is shown that in this case the system has solutions for all values of the parameters α and β if the function $f(x)$ is continuous and has a bounded derivative. The tenth part of the paper is devoted to a detailed analysis of the case when the function $f(x)$ is a continuous function with a bounded derivative. It is shown that in this case the system has solutions for all values of the parameters α and β if the function $f(x)$ is continuous and has a bounded derivative.
